- ➔ We provide you the finest designs that fascinate your clientele.
- ➔ Our developers will provide an interactive program by your requirements that meets up your expectations.
- ➔ With both design and development, we provide you the ideal package so that you can get it all done in one place with ease.
- ➔ Our services are customized from your given information. We make sure that you get a hassle-free customized design that is best for your clientele.

We try to give the best with your website with both web design and web development with creative ways to make your clientele have the best experience while they visit your website. We apply UI based design that makes the client experience more attractive so that they visit more often. For each project worked on we reach out for a particular attention to the interaction animations and performance of your site. So that your users enjoy a pleasant experience throughout their visit.

Our Design determines the look and feel of a website that exceeds quality and makes clients stay more time in your website exploring the contents. The interactions will be more client friendly so the visitors will be more fascinated. Successful websites have to attract and keep users, as well as be visible to search engines. Our web developers use creative ways to pull together user experience, search engine optimization.

Our programmers have strong coding skills. They have practiced and worked on various client projects. They give attention to details in every aspect of the website development. They test and debug the finish product before handing over to the client.

How we will work on your projects:

- ➔ Initial Consultation:
 - Firstly, we will consult you for establishing the overall lookout for the website and what we will provide you for the website.
- ➔ Sorting out the project:
 - We will do multiple meetings to select the best design, which contents suit your website, product goal from the customer requirements.
 - Also, in this meeting we will come up with the overarching strategy for your website. This will include how many pages we will be doing, how navigation will look like, visual hierarchy, communications, panels and more by the client requirements.
 - We will present a final output back to you for review & approval.

➔ Wireframing:

- Once the project is sorted out and agreed on, we will make a basic wireframe of your new website that will show you the outlook or a demo design website so that you understand how the site will look and how it will be interacted.

➔ Design:

- Once we make sure the wireframing we will start designing of your website with the vision which matches the wireframe.
- We will use Adobe xd, Figma, Adobe Photoshop, Adobe Illustrator, Adobe After Effects, Adobe Premier Pro, Blender.
- We then show you the final design and making the final changes in this stage before signing off and beginning development.

➔ Development (Web):

- Once the design has been agreed on and signed off, we will then develop the frontend of your website.
- For frontend we will use React, Django, vue.js, angular, Laravel, Html, CSS.
- For backend we will use JavaScript, Python, TypeScript, PHP, C#.
- For Database we will use MySQL, MongoDB, NoSQL.
- We make sure to provide you a code that will be helpful for further updates so that developers can update it and you can access it easily.

➔ Development (Android/iOS):

- Once the design has been agreed on and signed off, we will then develop the frontend of your website.
- For the development we will use Java, Kotlin, Jetpack Compose, C++, Swift, Flutter, React-Native.
- We make sure to provide you a code that will be helpful for further updates so that developers can update it and you can access it easily.

➔ Handover:

- After finishing the project, we will hunt down the bugs and glitches with a/b testing. And fix them ASAP
- We will make sure you get your desired product just how you expected it to be !
